

Web-Mon Enterprise™

Web Enabled Energy Monitor from the makers of E-Mon D-Mon®

- Meter Dashboard
- Carbon Footprint Dashboard
- Trend Builder
- Live Energy Data
- Normalization

E-Mon®
Energy Monitoring Products

Accurate and timely snapshots of energy usage and carbon footprint data are essential in supporting progressive energy management and green building initiatives. Web-Mon Enterprise edition provides users with one-page snapshots of historical and real-time energy usage accessible via any standard web-browser, either on an IP LAN and/or IP WAN network.

- Meter Dashboard - A one-page snapshot of real-time and historical energy usage. Graphical displays include kWh, kW, advanced meter functions including power factor, volts, and amps by phase and more.
- Carbon Footprint Dashboard - A one-page snapshot of estimated CO2 emission, SO2 & NOx and educational comparisons to forest growth and gasoline usage.
- Trend builder feature allows comparison of all recorded parameters of each meter.

The ability to manage your energy consumption is just a click away!
